

JustTooltip

JustTooltip is pure JQuery plugins which will work on mouse hover to relative element. This document contain how to implement JQuery Tooltip on our anchor or any other element.

This tooltip will work on mouse hover on the relative element. You can use on it on anchor, div or span or other element. This is very easy to add tooltip to add your page.

There are some features of justTooltip

- A Lightweight Responsive jQuery Tooltip Plugin.
- All four directions tooltip structure.
- High Resolution. Software Version: CSS2, CSS3, JQuery.
- Easy Documentation.
- No images are used, everything in CSS and JQuery.
- Browser Support: Firefox, Mozilla, IE 9 +, Opera, Safari (Mac).
- Screenshots also included in the documentation.
- 6 Month support for justTooltip.

Follow the steps to add tooltip to your page.

Add **style.css** in your head section

```
<link rel="stylesheet" type="text/css" href="tooltip.css"/>
```

Use **Main JQuery** library. Minimum version should be of 1.4.0.

```
<script src="jquery-3.2.1.min.js"></script>
```

Add Tooltip JQuery library

```
<script src="jquery.tooltip.js"></script>
```

Add below method to your **custom code** in the within scrip tag.

```
$(document).ready(function() {  
    $('a[data-title]').tooltip();  
});
```

Add **data-title** with your anchor tag and content which you want to show on tooltip

```
<a href='#' data-title='Your content'></a>
```

You can also use span, or div element instead anchor tag. Your content will be inside the quotes of data-title.

Choose your tooltip direction by using **data-placement** with your anchor tag. You can use "left", "right", "top" and "bottom" for tooltip direction. top will be default direction.

```
<a href='#' data-placement='right'></a>
```

Thanks to choose my scripts on Envato Market.
